

2027 Checklist to Assist with Livestock Claims: DRP

The information below describes the documentation required to allow NAU Country Insurance Company to pay an indemnity under a Quarterly Coverage Endorsement (QCE) on your 2027 livestock policy.

Any document provided which references you as the dairy producer, seller, or owner of the covered milk production MUST be in the same name as the policy. Documents intended to show ownership of covered milk production that are not in the name of the policyholder may reduce your indemnity payment.

Dairy Revenue Protection (DRP):	Documents (typically milk marketing records) corresponding to the quarter insured which verify the insured's share (interest) in the covered milk must include the following information: ^{1, 2} ➤ Name of the dairy producer ➤ Address of the dairy producer ➤ Payroll number (or similar identifier) of the dairy producer ➤ Monthly, or daily aggregated to monthly, total pounds received from that dairy producer
	If Component Pricing Option is elected: ^{1, 2} ➤ Total pounds of butterfat and protein contained in the dairy producer's milk
	If any milk production is also covered under other livestock insurance plans (i.e., LGM Dairy Cattle): ➤ The other insurance must be obtained from NAU Country ➤ Coverage must be for the same reinsurance year (i.e., 2027) ➤ The total declared covered milk production must include any milk production for the 3 months that fall within the quarterly insurance period covered under the other livestock insurance plan.³

If there is a payable loss on insured milk, the milk marketings for the quarterly insurance period must be at or above 85 percent of:⁴

- The sum of the declared covered milk production summed over all QCEs for the quarterly insurance period, **AND**
- Any milk production for the 3 months that fall within the quarterly insurance period covered under other livestock insurance plans (i.e., LGM Dairy Cattle).

In the event of a natural disaster or a reportable animal disease that prevents you from marketing milk, you must give NAU written notice within 72 hours of the disaster or reportable animal disease.⁵

Additional tips to expedite processing:

- **Do not submit original documents**, provide copies only.
- If there are **multiple claim years**, sort and group records by claim year and label properly.
- **Sign and return** the notice of probable loss (claim form) within sixty (60) days following the date the notice of probable loss is issued.⁶

NOTE: No indemnity will be due to you, but you will still be responsible for any premiums owed, if we find that your milk production worksheet:
(1) Is not supported by written verifiable records; OR (2) Fails to accurately report milk marketings or other material information.⁷
