

### RPowerD<sup>™</sup> - Quick Start Post Card

Sometimes good old fashion low tech is the right answer. We have created a link to a print ready PDF you can print on card stock locally or forward on to your local print shop for printing at this [link](#).

Agents report the most success quoting selling RPowerD when they follow the simple line of conversation on the front of the Revenue Power Decision Guide post card for both corn and then soybeans. You can find a video of how to use the card at this [link](#).

Create the RPowerD premium estimate on [AgenteVantage.com](http://AgenteVantage.com) by simply following the steps on the back of the card. Save the estimate as a template for future one click quoting, then go to the "Tools" tab to set up the Print Packet that will show outcomes in a grid format compared to just using an RP Policy.

**Open [www.AgenteVantage.com](http://www.AgenteVantage.com). Follow instructions below to create RPowerD estimate.**

**Max Price Movement Limit** - Subtract #4 from #2 - choose the closest amount in drop down menu

**Use Market Price** - If the "Market Price" shown is at or above #2, choose "Opt-In", else "Opt-Out"

**Estimate Coverage Level** - Select Estimate Coverage Level equal to MPC1 Coverage Level

**Alternative Price Discovery Periods** - Choose all months circled in #3

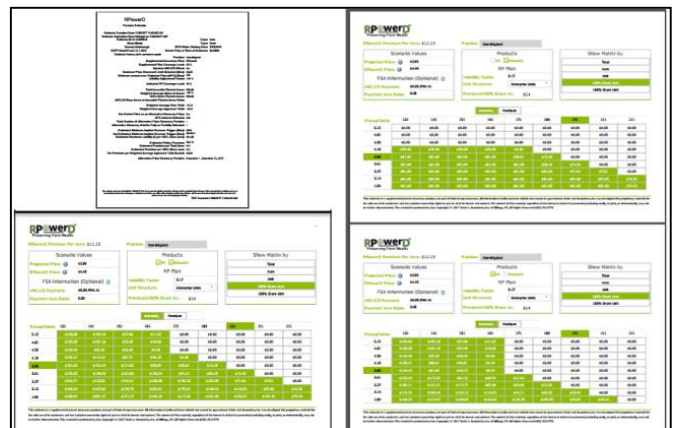

Open [scenario worksheet link](#) - Put answer from #2 in the box next to one of the months selected in question #3. Click "Calculate".

If "RPowerD Revenue Trigger" is **higher** than answer to question #1, reduce "Estimate Coverage Level" until numbers closely align

If "RPowerD Revenue Trigger" is **lower** than answer to question #1, increase "Estimate Coverage Level" until numbers closely align

Make note of "Estimate Coverage Level" and close scenario worksheet. You will now be in the RPowerD estimate again.

Change "Estimate Coverage Level" to match what you noted from the scenario worksheet. As a general rule you will want to extract the maximum subsidy by making sure the "MPC1 Coverage Level" is as close to the RPowerD "Estimate Coverage Level" as possible.
