

## 2027 PRF Rainfall Reminders

### The PRF Sales Closing Date (SCD) is December 1, 2026

- **New for 2027:** A new disclaimer is required for **ALL** PRF policies to acknowledge the 25% stocking-rate requirement for grazing.
- Changes in coverage must be on an application or confirmation/change form on or before the sales closing date.
- **New applications** must be submitted on the **2027** RI Application along with the Rainfall Index Disclaimer

### Application Requirements

| Requirement         | PRF entry                                                                                                                                                                                                             |
|---------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Name of crop        | PRF                                                                                                                                                                                                                   |
| Plan of Insurance   | Rainfall                                                                                                                                                                                                              |
| Coverage Level      | 70, 75, 80, 85, or 90%<br><b>Haying only:</b> If the insured elects different coverage levels by IR/NI, enter the two different coverage lines on the application                                                     |
| Productivity Factor | 60–150%, in 1% increments; only one factor per Intended Use<br>Type/Intended Use: Haying and/or Grazing                                                                                                               |
| Grid ID             | List each grid ID where the acreage is located                                                                                                                                                                        |
| Index Interval      | Coverage is elected in <b>two-month intervals</b> (Jan-Feb, Feb-Mar, Mar-Apr, etc.)                                                                                                                                   |
| Percent Value       | The sum of percentages for all Index Intervals by grid ID, intended use, irrigated practice, and share must equal 100%.<br><b>For the 2027 January–February interval, the maximum percent of value allowed is 25%</b> |

### The 2027 Acreage Reporting Date deadline is December 1, 2026

**New policies** – Use the 2027 Acreage Report-RI.

**Renewals** – Use our new renewal packet to make coverage changes and report acres!

- **All PRF policies must be entered in EASYmapping®.**
- On the renewal packet signature page, mark the box indicating that it applies to the acreage report.
- You can also use the 2027 Acreage Report-RI, found on the Agent Portal.
  - The acreage report must include a map and a point of reference (latitude/longitude) for every noncontiguous field, intended use, and irrigated practice within each grid.
  - Each point of reference must be within the insured grid and the insured acreage on the policy.
  - **Click the link below for instructions on entering a point of reference (POR) in EASYmapping® for the 2027 CY:**  
[https://www.naucountry.com/agent/tipsandtricks/tips-tricks-detail/pasture-rangeland-and-forage-\(prf\)-point-of-reference-\(por\)](https://www.naucountry.com/agent/tipsandtricks/tips-tricks-detail/pasture-rangeland-and-forage-(prf)-point-of-reference-(por))
- Acreage reports **MUST** be signed every year, even though the acres will roll from one year to the next and the acres are unchanged. Make sure to update the acres in the system with the acreage report signature date.
- Leases and lease certification forms are required by ARD.
- **Insureds must submit the FSA farm, tract, and field numbers for all fields.** These numbers are available in EASYmapping®.

## PRF Rainfall Units

- Insured acreage is divided into units based on the following:
  - Crop
  - Intended use (hay and grazing)
  - Index Interval (months elected)
  - Share
  - Irrigated Practice
  - Organic Practice
  - County
  - Report insurable acres and insured acres.
    - The insured is not required to insure all insurable acres. However, all acres elected for coverage must be reported, including both irrigated and non-irrigated acres.
- For grazing acres, the insurable interest is based on the interest in livestock and **not** the land.
