HRW Wheat (Jul) x **\$6.0850**

HRW Wheat (Sep) x **\$6.1500**

Spring Wheat (Sep) x **\$6.4023**

Cotton x **\$0.8037**

Agents can help their customers establish minimum price and revenue guarantees on the 2019 crops listed using the RPowerD estimator at www.AgenteVantage.com.

Prices in many 2019 year crops are hitting multi-year highs and are at levels that producers don't want to see get away from them.

Many producers can cover expected costs of production using 80 or 85 percent coverage levels of RPowerD right now.

Let your producers know that you have RPowerD available on Wheat, Cotton, and Grain Sorghum, in addition to Corn and Soybeans.

Today's focus is on wheat. Wheat prices hit multi-year highs just a day ago setting up a perfect opportunity for wheat growers to lock in a minimum price and revenue. With RPowerD they can insure minimum price and revenue on 110% of the most acres they've planted in the last four years, but only pay for acres they actually plant in 2019.

RPowerD's minimum crop insurance price can be established using the "Market Price" feature which gives a two trading session look back. More at this [link](#).

Some wheat quote examples:

RPowerD "Market Price" with Maximum Price Movement Limit of \$1.00.
